# Third Party Remote Video Auditing

## Another tool in food safety

Our customers rely on us for quality and our ability to safeguard the wholesomeness and integrity of the products we buy, produce and sell. Third-party Remote Video Auditing (RVA) has the promise to offer another tool in our mission of safeguarding the food we produce and sell. By implementing a RVA pilot in our beef processing plants, we continue to elevate the importance of food safety.

The RVA pilot will take place at two beef processing plants across North America. Third-party auditors, Arrowsight, Inc., will conduct the pilot. ADT Security Services will install and provide the video equipment.

The RVA pilot is in addition to floor observations and internal camera auditing already being done in the beef processing plants. One of the goals of the RVA pilot is to assess how the three monitoring systems fit together.

Assessing and understanding the monitoring systems allows us to continue to build a better food safety system.

### About Remote Video Auditing

**Remote video auditing (RVA)** is a series of video cameras, motion sensors, digital video recorders and other technologies that audit and record operations. Third party auditors connect remotely and view samples of the recordings. The auditors measure whether workers have met goals and provide near-real-time feedback to management and workers. Stakeholders receive statistical feedback on the performance of the operation.

## **RVA and our partners**

The RVA food safety pilot is a natural extension of our RVA program that remotely audits animal welfare practices at ten North American beef plants.

"The early results with our animal welfare program were positive and we have been able to enhance an already impressive operational performance" says Dr. Mike Siemens, Cargill Leader – Animal Welfare and Husbandry.

Cargill partnered with Arrowsight, Inc. and ADT Security Services for the animal welfare rollout and implementation. The partnership will continue for the food safety pilot.

"We are pleased that Cargill has elected to extend the RVA program into these important food safety applications," says Adam Aronson, Chief Executive Officer of Arrowsight, Inc.

[Arrowsight, Inc.](#) a web-based Application Services Provider, has helped improve practices, compliance and employee morale in safety-sensitive industries, such as food manufacturing, food services, and health care.

[ADT Security Services](#) is the world's largest electronic security provider. ADT's total security solutions include intrusion, fire protection, video services, access control, critical condition monitoring, and integrated systems.
